Good Afternoon,

I left a voicemail for Shelby Ferguson yesterday morning, and am following up with redlines, and some questions. The attached redlines have also been uploaded to the portal.

1. What is the maximum distance away from the traffic lane that the cameras can be at to get accurate readings? We would prefer if these were attached to existing poles, but many of the nearby poles are against the right of way, which may be too far to get accurate readings. From what I understand, this is also speed dependent.
2. How long will the installation/any lane closures take per location? Most of these roads have a high AADT (20,000+), so it is likely that the District/Division will have time/day restrictions. I will inquire internally to determine these restrictions.
3. Can all these poles be accessed for maintenance without the need for traffic control?

My other comments are addressed through the redlines. Please feel free to reach out if you have any questions.

Thank you,

Samuel “Clark” Nichols, EI
Encroachments Engineer Consultant
Utilities Unit
North Carolina Department of Transportation
